SmartFusion cSoC: Building Executable Image in Release Mode and Loading into eNVM

Introduction

SmartFusion® customized system-on-chip (cSoC) devices contain a hard embedded microcontroller subsystem (MSS), programmable analog circuitry, and FPGA fabric consisting of logic tiles, SRAM, and PLLs. The MSS consists of 100 MHz ARM® Cortex™-M3 processor, advanced high-performance bus (AHB) matrix, system registers, Ethernet MAC, DMA engine, real-time counter (RTC), embedded nonvolatile memory (eNVM), embedded SRAM (eSRAM), fabric interface controller (FIC), I²C, SPI, and EMC. Figure 1 - shows the SmartFusion cSoC block diagram.

This tutorial explains how to build an application executable image in 'release mode' and load it into eNVM for executing code in place in eNVM of the SmartFusion cSoC device. You can load the application executable image into eNVM with the help of eNVM data storage client from SmartDesign MSS Configurator and IAP or FlashPro programming software. In the release mode, you cannot use SoftConsole debugger to load the executable image into eNVM.

This tutorial is in continuation of the SmartFusion tutorials and explains you how to build the applications in release mode after completion of application debugging. Refer to the [Using UART with SmartFusion - Microsemi Libero SoC and SoftConsole Flow Tutorial](#) to understand the flow for debugging mode.

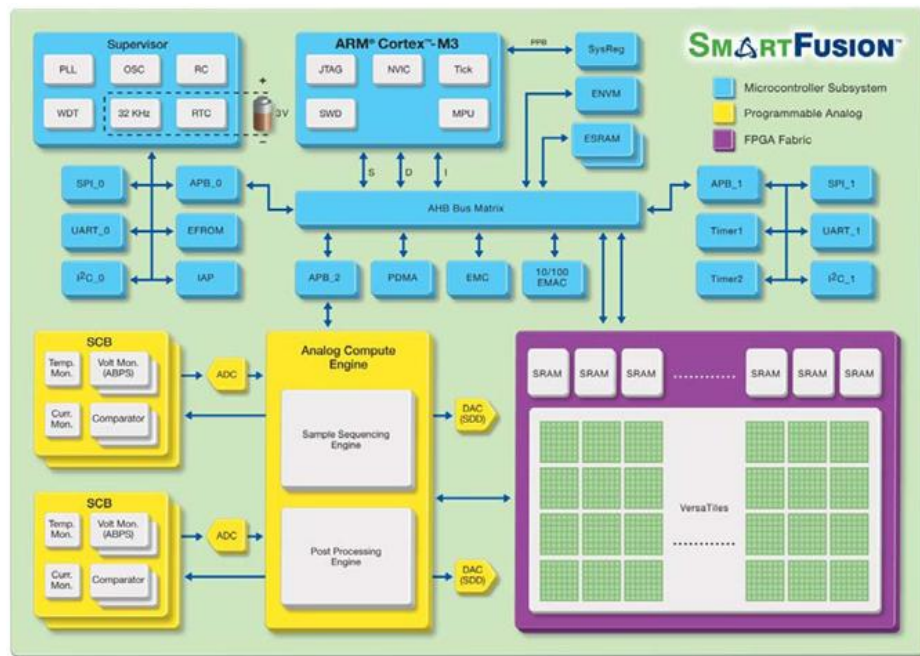

Figure 1 - SmartFusion cSoC Block Diagram

Building an Executable Image in Release Mode

This section outlines the steps required to build an executable image in release mode for executing the code in place in eNVM of the SmartFusion cSoC device.

1. Open the SoftConsole project workspace provided in the design files of this tutorial.
2. Right click on both project names in the Project Explorer view and select **Build Configurations > Set Active > Release** as shown in Figure 2 .

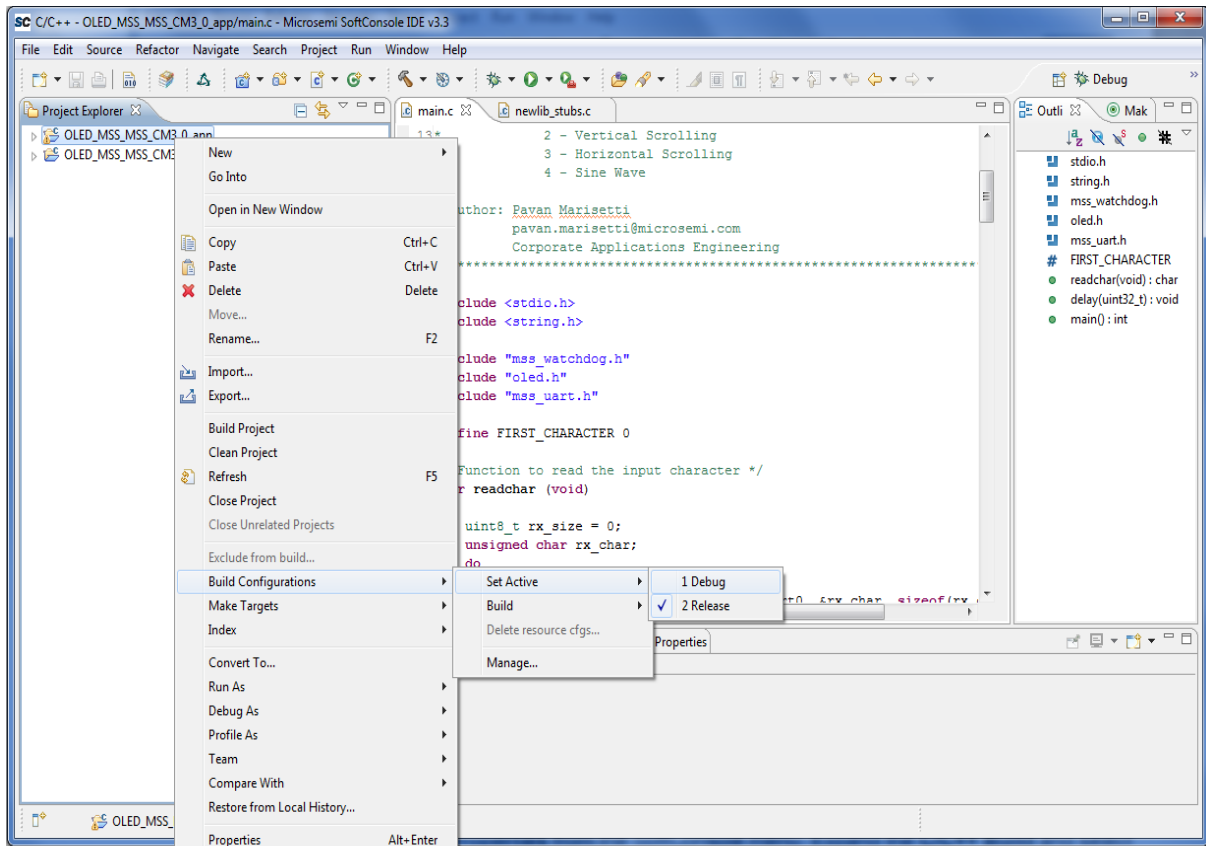

Figure 2 · Configuring Release Mode

3. Select **Project > Properties** from the SoftConsole menu. Expand the **C/C++ Build** and select **'Settings'**.
4. Provide the release mode linker script file to the linker by changing the **'Linker flags'** field to **"-T./../OLED_MSS_MSS_CM3_0_hw_platform/CMSIS/startup_gcc/production-execute-in-place.ld"** as shown in the Figure 3 .

Figure 3 · Linker Script Settings

5. Click **Apply** and then click **OK**.
6. Build the project (**Project > Build All**) and observe that '.hex' file is generated in 'Release' folder created in project folder as shown in Figure 4 · and Figure 5 ·

Figure 4 · Release Folder Location in Project Folder

Figure 5 · Hex File Location in Release Folder

Loading the Executable Image into eNVM

This section outlines the steps required to load the generated executable image into eNVM of the SmartFusion cSoC device using the SmartDesign MSS Configurator.

1. Open the Libero SoC hardware project provided in the design files of this tutorial.
2. Open the MSS component created using the SmartDesign MSS Configurator by double clicking on the MSS component present in the 'Design Hierarchy' window. The **SmartDesign MSS Configurator** tab is displayed as shown in Figure 6 .

If you are using the SoftConsole standalone flow then the created MSS component can be launched from the SoftConsole project workspace (**Run > External Tools > MSS_Configurator**).

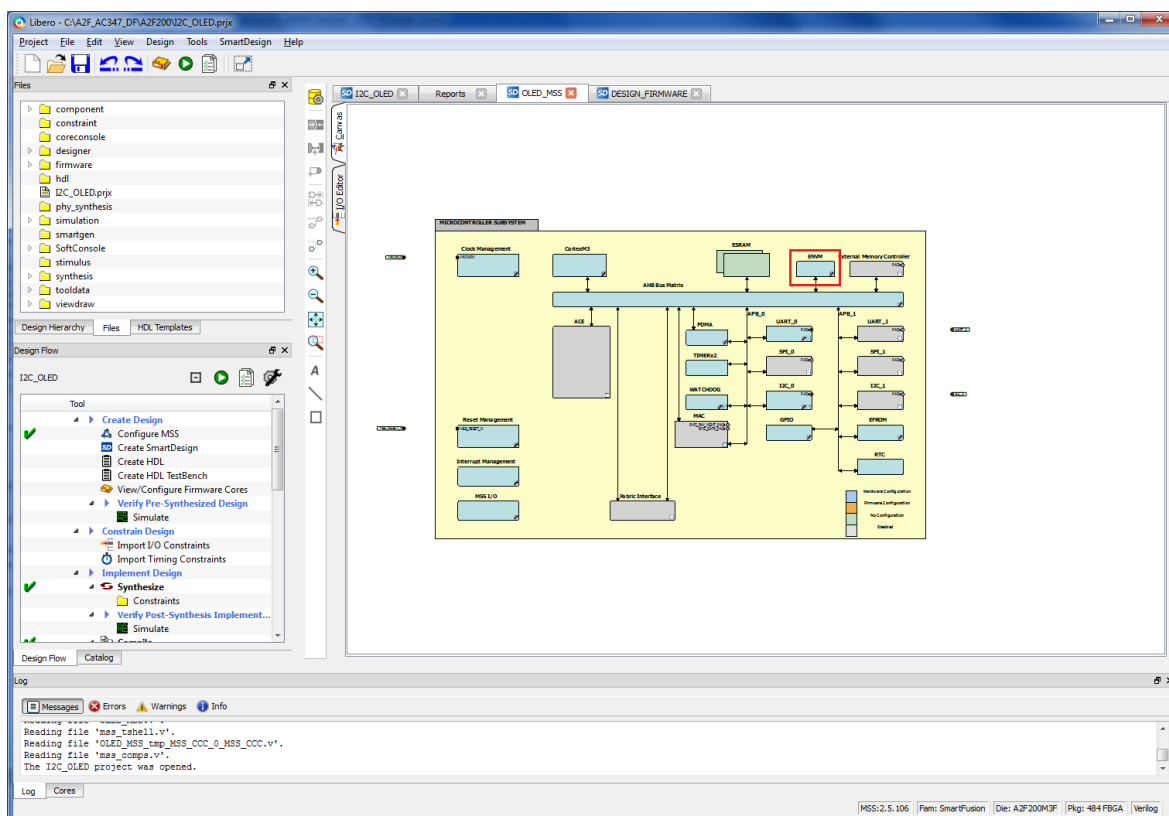

Figure 6 · SmartDesign MSS Configurator

3. Double click on the eNVM module available in the SmartDesign MSS Configurator to add eNVM data storage client. The MSS_ENV_0 configurator window is displayed as shown in the Figure 7 · .

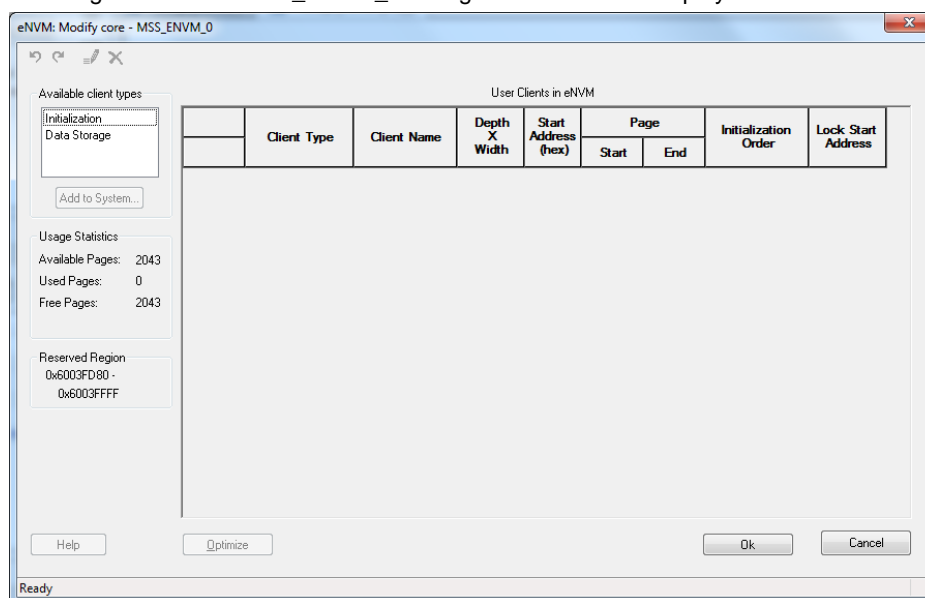

Figure 7 · MSS_ENV_0 Configurator

4. Select **Data Storage** under the **Available client types** tab and click **Add to System**. The **Add to Data Storage Client** window opens as shown in Figure 8 .

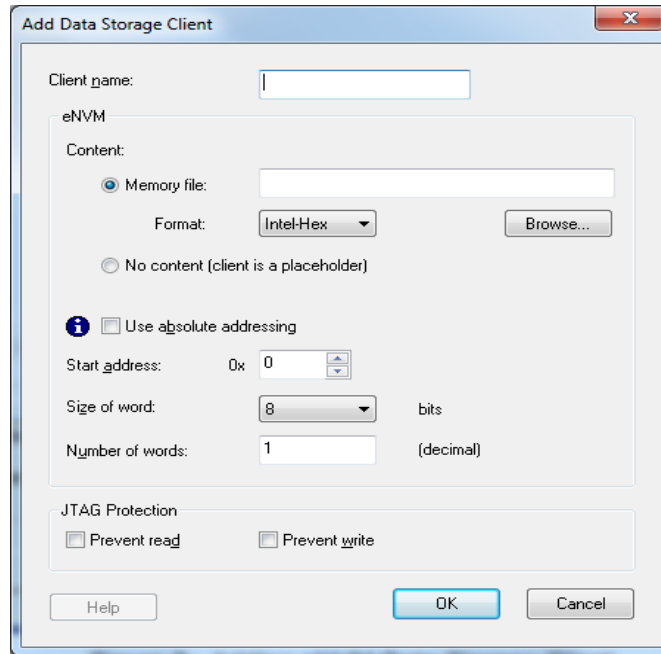

Figure 8 · Adding eNVM Data Storage Client

5. Enter a data storage client name in the **Add to Data Storage Client** window.
6. Browse for .hex file generated in the Building an Executable Image in Release Mode section. The generated executable image can be found in the Release folder under SoftConsole project workspace as shown in the Figure 9 .

Figure 9 · Browsing for .hex File

7. Change the size of word to 32 bits as shown in the Figure 10 .

Figure 10 · Loading *.hex File

8. Click **OK** in the **Add Data Storage Client** window and the **MSS_ENVM_0 Configurator** window.
9. Regenerate the MSS component by clicking **SmartDesign > Generate Component**.
Note: If you are following SoftConsole Standalone flow then skip step 11.
10. Click **Generate Programming Data** to complete the remaining steps to generate fdb file. (synthesis, place-and-route).
11. Open the FlashPro project by right-clicking on the **Program Device** icon in the Libero SoC Design Flow window and select **Open Interactively**. If you are following the SoftConsole Standalone flow then open the created FlashPro project and modify the **Programming file** by **Import** the updated Embedded Flash Memory Configuration file (.efc file) from the generated MSS component folder. Refer to the [SoftConsole Standalone Flow Tutorial](#) for more information on importing .efc file.

12. The FlashPro tool will be displayed as shown in the Figure 11 . .

Figure 11 · PDB File Loaded by FlashPro

13. Click **File > Export > Export Single Programming File** for generating the STAPL file as shown in Figure 12 . .

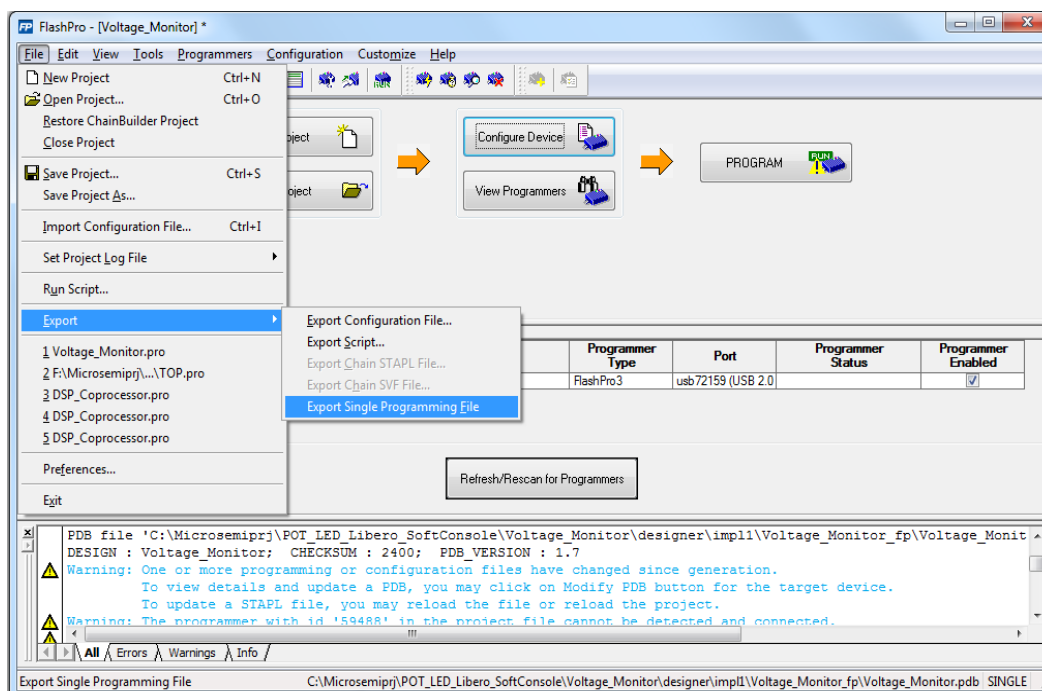

Figure 12 · Exporting The Programming File

14. Clear all the **Output formats** except the STAPL File as shown in Figure 13 · . Click **Export** and then **Close**.

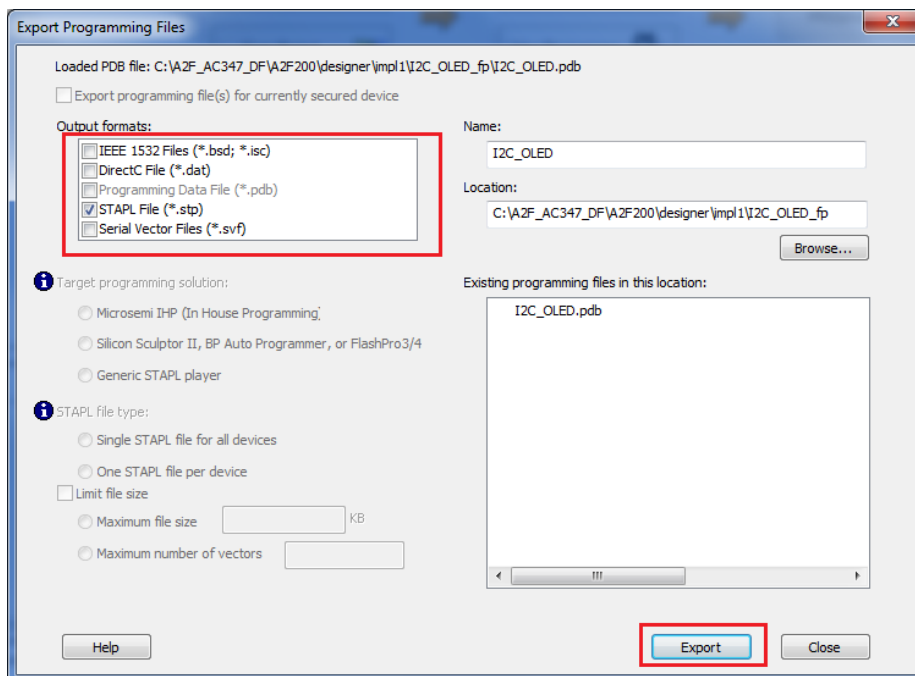

Figure 13 · Generating STAPL File

15. Click **Configure Device** and then **Browse**.

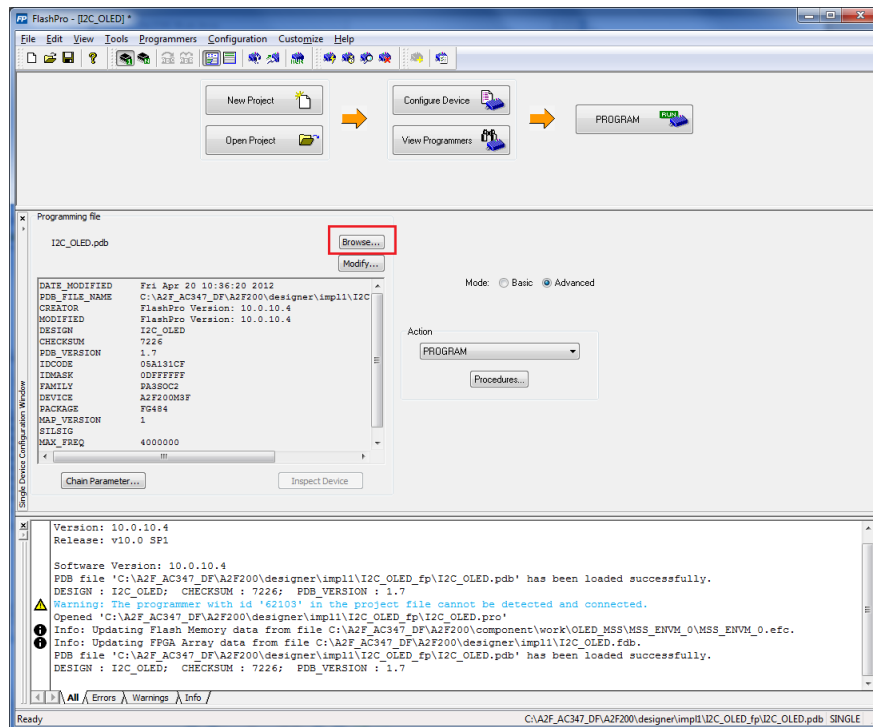

Figure 14 · Configure the Device

16. Select the .stp file and click **Open** as shown in Figure 15 . .

Figure 15 · Selecting .stp File

17. Click **PROGRAM** to program the device. Observe the FlashPro log window showing 'Program Embedded Flash Memory Module ALL...' command execution as shown in the Figure 16 . .

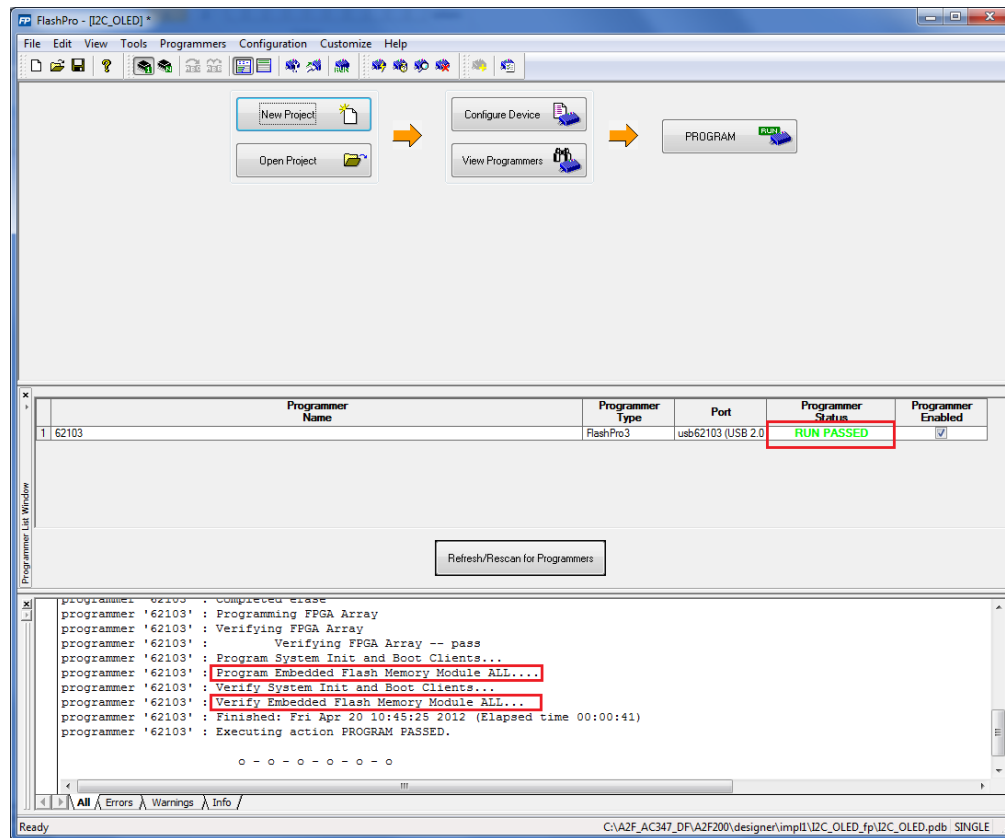

Figure 16 · FlashPro Programming

18. Once programming is done, save the project and close FlashPro project.
 19. Remove the USB cable for the programmer and restart the board to run the application.
- Note:** You need not run the debugger using SoftConsole since the code is already programmed into eNVM using FlashPro.

List of Changes

Revision	Changes	Page
Revision 2 (April 2012)	Updated screenshots and content for Libero SoC SP1 (SAR 38221).	NA
Revision 1 (November 2011)	Updated screenshot for Libero SoC and support for STAPL File generation (SAR 34981).	7, 11

Note: The revision number is located in the part number after the hyphen. The part number is displayed at the bottom of the last page of the document. The digits following the slash indicate the month and year of publication.

Product Support

Microsemi SoC Products Group backs its products with various support services, including Customer Service, Customer Technical Support Center, a website, electronic mail, and worldwide sales offices. This appendix contains information about contacting Microsemi SoC Products Group and using these support services.

Customer Service

Contact Customer Service for non-technical product support, such as product pricing, product upgrades, update information, order status, and authorization.

From North America, call **800.262.1060**

From the rest of the world, call **650.318.4460**

Fax, from anywhere in the world **408.643.6913**

Customer Technical Support Center

Microsemi SoC Products Group staffs its Customer Technical Support Center with highly skilled engineers who can help answer your hardware, software, and design questions about Microsemi SoC Products. The Customer Technical Support Center spends a great deal of time creating application notes, answers to common design cycle questions, documentation of known issues and various FAQs. So, before you contact us, please visit our online resources. It is very likely we have already answered your questions.

Technical Support

Visit the Microsemi SoC Products Group Customer Support website for more information and support (<http://www.microsemi.com/soc/support/search/default.aspx>). Many answers available on the searchable web resource include diagrams, illustrations, and links to other resources on website.

Website

You can browse a variety of technical and non-technical information on the Microsemi SoC Products Group home page, at <http://www.microsemi.com/soc/>.

Contacting the Customer Technical Support Center

Highly skilled engineers staff the Technical Support Center. The Technical Support Center can be contacted by email or through the Microsemi SoC Products Group website.

Email

You can communicate your technical questions to our email address and receive answers back by email, fax, or phone. Also, if you have design problems, you can email your design files to receive assistance. We constantly monitor the email account throughout the day. When sending your request to us, please be sure to include your full name, company name, and your contact information for efficient processing of your request.

The technical support email address is soc_tech@microsemi.com.

My Cases

Microsemi SoC Products Group customers may submit and track technical cases online by going to [My Cases](#).

Outside the U.S.

Customers needing assistance outside the US time zones can either contact technical support via email (soc_tech@microsemi.com) or contact a local sales office. [Sales office listings](#) can be found at www.microsemi.com/soc/company/contact/default.aspx.

ITAR Technical Support

For technical support on RH and RT FPGAs that are regulated by International Traffic in Arms Regulations (ITAR), contact us via soc_tech_itar@microsemi.com. Alternatively, within [My Cases](#), select **Yes** in the ITAR drop-down list. For a complete list of ITAR-regulated Microsemi FPGAs, visit the [ITAR](#) web page.

Microsemi Corporation (NASDAQ: MSCC) offers a comprehensive portfolio of semiconductor solutions for: aerospace, defense and security; enterprise and communications; and industrial and alternative energy markets. Products include high-performance, high-reliability analog and RF devices, mixed signal and RF integrated circuits, customizable SoCs, FPGAs, and complete subsystems. Microsemi is headquartered in Aliso Viejo, Calif. Learn more at www.microsemi.com.
