Overview

Microsemi's SmartFusion[®]2 SoC FPGA Evaluation Kit is the lowest cost FPGA platform for developing cost-optimized FPGA designs using Microsemi's SmartFusion2 System-on-Chip (SoC) FPGAs, which integrate inherently reliable flash-based FPGA fabric, a 166 MHz ARM[®]Cortex[™]-M3 processor, advanced security processing accelerators, DSP blocks, SRAM, eNVM, and industry-required high-performance communication interfaces, all on a single chip. The SmartFusion2 SoC FPGA Evaluation Kit makes it easy to develop transceiver I/O-based FPGA designs to build PCI Express[®] and Gigabit Ethernet-based systems. The board is also small form-factor PCIe compliant, which will allow quick prototyping and evaluation using any desktop PC or laptop with a PCIe[®] slot.

The kit enables you to:

- Develop and test PCI Express Gen2 x1 lane designs
- Test signal quality of the FPGA transceiver using the full-duplex SERDES SMA Pairs
- Measure the low power consumption of the SmartFusion2 SoC FPGA
- Quickly create a working PCIe link with the included PCIe Control Plane Demo

The board includes an RJ45 interface to 10/100/1000 Ethernet, 512 MB of LPDDR, 64 MB SPI Flash, and USB-UART connections, as well as I²C, SPI, and GPIO headers. The kit includes a 12 V power supply but can also be powered through the PCIe edge connector. Also included is a free Gold License for the Libero[®] SoC software toolset to enable FPGA development and to utilize the reference designs made available with the kit. In addition, a FlashPro4 JTAG programmer is included for programming and debugging.
