Microsemi Corp. will announce the full production launch of a new line of PowerDsine Gigabit midspans and splitters for upgrading existing network infrastructures for Power over Ethernet (PoE) access. The launch includes 6-, 12- and 24-port HiPoE midspans in the PD-7000G Series (pictured), the PD-7001G single-port HiPoE midspan, and the PD-AS-701 Splitter Series that offers a choice of 12-, 18- or 24-volt output.

The PowerDsine HiPoE midspans inject up to 32 watts of power over existing Cat 5 Ethernet cable, letting end devices receive safe power and data on the same line. The devices can double the power allowed under the existing 802.3af power standard and are compliant with the new pre-standard, 802.3at. Higher power boosts readiness for Gigabit Ethernet applications like 802.11n wireless, IP security cameras,

WiMAX transmitters, thin clients and video phones. The new splitter service enables the addition of PowerDsine high power capabilities to devices that are not PoE compliant.
