### General Availability of Engineering Samples for PolarFire™ FPGAs
Microsemi’s lowest power, cost-optimized mid-range PolarFire FPGA engineering samples are now available for all customers. The PolarFire FPGA family spans from 100K logic elements (LEs) to 500K LEs, features 12.7G transceivers, and offers up to 50% lower power than competing mid-range FPGAs.

### PolarFire Evaluation Kit Now Shipping
Microsemi’s [PolarFire Evaluation Kit](#) is a comprehensive platform for evaluating PolarFire FPGAs and is well-suited for high-speed transceiver evaluation, 10 GbE, JESD204B, PCIe, and CPRI. The kit features a high-pin-count FPGA mezzanine card (FMC) connector, numerous surface mount assemblies (SMAs), PCIe, dual Gigabit Ethernet RJ45, small form-factor pluggable (SFP) modules, DDR4, DDR3, and USB.

### Open. Lowest Power. Programmable RISC-V Solutions
Microsemi now offers a comprehensive software tool chain and a RISC-V IP core for your designs. [SoftConsole](#) v5.1 is the world's first available Windows-hosted Eclipse IDE for designs utilizing RISC-V open ISAs. Microsemi’s RV32IM RISC-V core is available for PolarFire, RTG4, and IGLOO2 FPGAs.

### PolarFire Reference Designs Now Available for Evaluation Kit
[Multiple demo reference designs](#) are available now with full design files for Libero SoC PolarFire targeting the PolarFire Evaluation Kit. These include JESD204B interface, PCIe endpoint, 10GBASE-R Ethernet loopback, DSP FIR filter, and multi-rate transceiver demo, with additional reference designs planned over the coming months.
Libero SoC PolarFire v1.1 SP1 Available Now

Libero SoC PolarFire Design Suite provides high productivity with its comprehensive, easy to learn, easy to adopt development tools for designing with Microsemi’s PolarFire FPGAs. The release of v1.1 SP1 includes faster run time, DDR3 support, and support for advanced 10 Gbps transceiver-based protocols, as well as IBIS AMI models for advanced simulation of signal integrity.
