Subject: Microsemi SoC Products Group (formerly Actel) relocation to San Jose, CA

Dear Customer,

SoC Products Group will be relocating to a larger complex at 3850/3870 N 1st St, San Jose, CA 95134, 10 miles from its current location (2051/2061 Stierlin Court, Mountain View CA 94043). The operations production area (Test, Inspection, Programming, Mark, End-Of-Line and Warehouse) is scheduled for relocation effective April 6, 2012.

Relocation to the new facility is intended to maintain or improve current operational capabilities and consolidate with other Microsemi divisions in the area. Evaluations of SoC Products Group's current capabilities and future needs were assessed as part of the transition to a new facility.

At the new San Jose location, the operations production area will use the same production equipment, processes and personnel. After the move, SoC Products Group will re-certify the operations area. The certification process will include the following:

- Production area process, ESD and Temperature/Humidity audit
- Calibration of production equipment
- Pre/post move correlation of equipment used for Final Test
- Gauge Repeatability and Reproducibility study of Final Test and Inspection equipment

This move affects all SoC products. CAGE code (0J4Z0) remains the same.

Shipments of devices from the San Jose Facility could begin as early as April 2012. For questions and to request a facility certification report (available May 1, 2012), please contact SoC Products Group Customer Service at customer.service@actel.com.

Regards,

Microsemi SoC Products Group
