Subject: Nonvolatile and volatile memory on the Actel Silicon Sculptor II and Sculptor 3 Programmers

Dear Actel Customer,

Actel's Silicon Sculptor II and Silicon Sculptor 3 programmers, designed and manufactured by BPM Microsystems, includes several memory devices on the motherboard and technology adapter board.

We have been officially assured however, in writing by BP Microsystems, that at no time is customer data stored on any of the nonvolatile memory components. Only DRAM devices are exposed to customer specific design information. Of course, any data on the DRAM device is lost upon power down.

The official letter from BP Microsystems is available under Non-Disclosure Agreement if more information is required on this subject.

Yours sincerely,

A handwritten signature in purple ink, appearing to read "Wendy Lockhart".
