

## Microsemi Corporation

April 9, 2014

### Customer Notification No: CN1410

### Customer Advisory Notice (CAN)

**Subject:** Timing Enhancements for RTAX-S/SL/DSP and Axcelerator FPGAs in Libero IDE v9.2 Software.

Dear Customer,

Libero IDE v9.2 software includes the following timing analysis and timing data enhancements for all devices in the RTAX-S/SL/DSP and Axcelerator FPGA families:

1. The data path delay used during Hold Check under Worst Case timing analysis is updated from T<sub>max</sub> to T<sub>min</sub>.
2. The default Setup Check under Best Case timing analysis is updated from using User Setting timing data to Fastest Silicon timing data.
3. T<sub>min</sub> timing data is improved resulting in better overall performance than previous Libero IDE versions.

Users only need to re-run timing analysis using Libero IDE v9.2 for complex clocking scheme designs, which have gated clocks or clocks using regular routing resources. Examples of the complex clocking schemes can be found in the application note AC395. For new designs, Libero IDE v9.2 is recommended, as it has improved timing data which will result in better performance than previous Libero IDE versions. It is recommended to run four-corner timing analysis on all RTAX-S/SL/DSP and Axcelerator designs.

For more details on these enhancements and guidance for existing and new designs, refer to the applications note AC395 Timing Analysis of RTAX-S/SL/DSP Design Using Libero IDE v9.2:
