**Subject: SmartFusion2 and IGLOO2 use the same compiled simulation library**

Dear Customer,

Some of you might have noticed that only SmartFusion2 is included in 3rd party compiled simulation libraries shown on <http://www.microsemi.com/products/fpga-soc/design-resources/design-software/libero-soc#documents> and there is no mention about IGLOO2. **This is because compiled simulation libraries are the same for both SmartFusion2 and IGLOO2.**

While you installed Libero SoC, you should have noticed a single check box for SmartFusion2 and IGLOO2. The simulation models for both SmartFusion2 and IGLOO2 are contained in the library named smartfusion2. You can simulate designs for either technology using this library.

For any clarifications or questions, please contact Microsemi SoC Tech Support.
