**Customer Notification No: CN1418  
Customer Advisory Notice (CAN)**

**Subject:** Designing without OLED Display on SmartFusion Evaluation Kits

Dear Customers,

This notification provides instructions on how to design with the SmartFusion Evaluation Kits (A2F-EVAL-KIT-2) without using the OLED Display.

There is a known issue with the SmartFusion Evaluation Kits characterized by the impairment or loss of functionalities on the OLED Display. It is strongly recommended that customers who encounter this issue avoid using the OLED Display. The alternative method is to reroute the output through UART such that the output displays in a terminal window. Demo designs for the SmartFusion Evaluation Kit will be updated on the Microsemi Website to demonstrate this.

Due to this issue, the OLED Display will be defeatured from the SmartFusion Evaluation Kit. As of November 1, 2014, all SmartFusion Evaluation Kits shipped will no longer have an OLED Display. All relevant documents, including user guide and demo designs, will also be updated to reflect this change.

Customers who find this issue on their SmartFusion Evaluation Kit and would like to send in their current kit for a replacement should request an RMA through the channel used to purchase the kit. Replacement SmartFusion Evaluation Kits will be identical to the current SmartFusion Evaluation Kits but with the OLED Display removed. No concession will be given for the removal of the OLED, and no price changes will be made for the SmartFusion Evaluation Kits.
