PCI Express® (PCIe) is a widely deployed bus interconnect interface that is commonly used in server platforms. Increasingly, it is also used as a storage and GPU interconnect solution. PCIe Gen3 supports 8 GT/s of throughput per PCIe lane and Gen4 supports 16 GT/s. Typical implementations utilize x2, x4, x8 and x16 lane width interconnect configurations—directly from the host root complex or through PCIe switches to endpoint PCIe devices.

Microchip is a leader in PCIe, having introduced multiple industry firsts. Highlights include:

- PCIe Gen3 SAS/SATA RAID controller
- The industry’s highest-density and lowest-power Gen3 PCIe switches, Switchtec™ PSX and PFX
- PCIe Gen3 NVMe Flash controller (Flashtec™), followed by a second-generation introduction of the industry's fastest PCIe Gen3 NVMe SSD controllers
- PCIe Gen3 redriver with EQNOX™ adaptive equalization
- Flash-based FPGAs and SoCs used in CPLD functions with integrated PCIe endpoint implementations

Microchip offers a flexible product portfolio to intelligently design your PCIe system for data center, communications, defense and industrial applications. Our industry-leading PCIe solutions include storage and fanout switches, NVMe controllers, NVRAM drives, redrivers and timing solutions and Flash-based FPGAs and SoCs.
Advantages

**Switchtec PCIe Switches**
- Options from 24 to 96 lanes
- Industry’s most flexible port bifurcation, from ×2 to ×16 lanes per port
- Highest port and Non-Transparent Bridge (NTB) density, with up to 48 ports and 48 NTBs
- Highest switch partition density
- Industry’s first integrated programmable processor
- Industry’s first integrated enclosure management solution
- PFX-I supports industrial temperature ranges, –40°C (TA) to 105°C (TJ)

**Flashtec NVMe Controllers**
- World’s first and fastest enterprise PCIe NVMe controller, with up to 850K IOPS and up to 8 TB
- Software-defined flash: flexible, programmable architecture optimized for cost, performance and endurance
- Enterprise-class reliability, availability and serviceability with NVMe management features and industry’s only dual-port controller

**Flashtec NVRAM Drives**
- Non-volatile DRAM with over 10 million IOPS, sub-microsecond latency
- Industry-standard interfaces that are application-friendly for ease of integration
- Zero-maintenance green backup
- Unlimited endurance NVRAM
- Small form factor for high-density rack solutions

**Signal Integrity**
- PCIe Gen 3.0 solutions supporting ×1 to ×8 lanes
- Adaptive EQ and de-emphasis with up to 30 dB loss compensation
- BOM integration and smaller package sizes save board cost and area
- Low-power modes scale with speed and drive strength
- High ease of use

**Timing Solutions**
- End-to-end offerings, including synthesis, rate conversion, attenuation and distribution
- Ultra-low-jitter (160 fs) synthesizers and attenuators
- Ultra-low additive jitter, cost-efficient buffers
- Application specific with custom configuration—MiClockDesigner™
- Validated with the Agilent Time Domain PCI-SIG Compliance Software Suite
**PCIe Signal Integrity**

Improve weak or degraded signals with Switchtec PCIe signal integrity solutions. With industry-exclusive EQNOX™ adaptive equalization add Switchtec’s PCIe redrivers and crosspoint switches deliver excellent performance in a compact footprint with flexible lane configurations for Gen1/2/3 applications, including passthrough buffer, non-blocking matrix switching, replication of inputs to multiple outputs and multiplexing.

**Clock Fanout Buffers**

Microchip’s high-performance buffers complement clock synthesis devices by providing additional fanout capabilities and minimal jitter combined with the industry’s best power supply noise rejection performance. This preserves signal integrity by adding ultra-low jitter and filtering noise from power supplies, resulting in better performance while simplifying engineering board design efforts.

PCIe Fanout and Storage Switches

PFX PCIe Fanout Switches
Switchtec PFX fanout PCIe switches provide the industry’s highest-density, lowest-power PCIe switch for data center, communications, workstation, and video production applications. With simple hardware configuration and advanced diagnostics and debug capabilities, the PFX enables PCIe solutions for a wide variety of systems, from Just A Bunch Of Flash (JBOF) to general-purpose applications requiring low-power and high-reliability PCIe switching.

PFX-I Industrial Temperature Fanout Switches
Switchtec PFX-I fanout PCIe switches support the full feature set of the PFX switch with an extended industrial temperature operating* range of –40°C to 105°C (T_α to T_J). PFX-I switches also provide the industry’s highest-density and lowest-power, with simple hardware configuration and advanced diagnostics and debug capabilities. Typical applications include data center equipment, defense, industrial servers, test equipment, cellular infrastructure, access networks, metro networks and core networking.

PFX-L Fanout-Lite PCIe Switches
Switchtec PFX-L fanout-lite PCIe switches support up to 96 lanes, 24 ports, x4/x8/x16 port bifurcation, two Non-Transparent Bridges (NTB), hot-plug controllers, advanced diagnostics and debug, end-to-end data integrity, SRIS, and low power. The PFX-L switches maintain footprint compatibility with the PFX switch family. Typical applications for the PFX-L include data center equipment, defense, industrial servers, workstations, test equipment, video production and broadcasting equipment, cellular infrastructure, access networks, metro networks and core networking.

PSX PCIe Storage Switches

Switchtec PSX PCIe storage switches are engineered to scale PCIe Flash in high-performance, robust storage systems, providing the industry’s highest-density, lowest-power, high-reliability switch and is also the first programmable PCIe switch with an integrated processor. Using the PSX Software Development Kit (SDK), customer can enhance PCIe switch functionality and customize error handling.

Switchtec PAX Gen3 Advanced Fabric PCIe Switch Family

The Switchtec PAX Gen3 Advanced Fabric PCIe Switch family comprises programmable and high-reliability PCIe Gen3 switches supporting high performance PCIe fabric connectivity, multi-host sharing of SR-IOV endpoints, up to 96 lanes, 48 ports, 24 virtual switch partitions and hot- and surprise-plug controllers for each port. The switch family also features advanced error containment, comprehensive diagnostics and debug capabilities, a wide breadth of I/O interfaces, and an integrated MIPS processor. PAX switches utilize a system-on-chip architecture that optionally enables customer differentiated solutions through firmware customization and enhancements. Applications for the PAX family include scalable multi-host systems, SR-IOV enabled JBOFs, composable, disaggregated systems and rack scale architectures.

Switchtec Open Source Linux® Drivers, Hardware, Open Collaboration and Technology Sharing
PolarFire™ PCI Express Features
Each PolarFire FPGA integrates two low-power built-in PCIe Gen2 controllers, allowing seamless and easy connectivity to one or more host processors. The following are PCIe features:

- x1, x2, and x4 lane support
- Suitable for root port, native endpoint
- PCI Express base specification revision 2.0 and 1.1 compliant
- AXI4 master and slave interfaces to the FPGA fabric
- Single function capability
- Advanced Error Reporting (AER) support
- Integrated Clock Domain Crossing (CDC) to support user-selected AXI4 frequency
- Lane reversal support
- Legacy PCI power management support
- Native active state power management L0s and L1 state support
- Power Management Event (PME message)
- MSI and legacy INT message support
- Latency Tolerance Reporting (LTR)
- L1 PM sub-states with CLKREQ
- Address translation tables between the PCIe and AXI4 domains

SmartFusion®2 and IGLOO®2 PCIe Features
The SmartFusion2 and IGLOO2 transceivers provide full support for PCI Express Gen 2.0. Details are provided in SmartFusion2 Documents (https://www.microsemi.com/products/fpga-soc/soc-fpga/smartfusion2#documentation) and IGLOO2 Documents (https://www.microsemi.com/products/fpga-soc/fpga/igloo2-fpga#documentation) on our website. Features include:

- Gen1/Gen2 rates at x1, x2 and x4 links
- Endpoint topology
- Single-function/single-VC
- Receiver and transmit buffers support Error Correction And Coding (ECC)
- Fabric interface options of AXI3 Master/Slave or AHB32 Master/Slave
- Address translation window support between PCIe and local device address space

PCI-SIG Compliance
Multiple solutions from Microchip solutions have passed PCI-SIG compliance suites.

Please refer to the PCI-SIG integrators list to view Microsemi PCI Solutions.
http://pcisig.com/developers/integrators-list?field_il_comp_product_type_value=All&keys=microsemi

Why Choose Microchip for PCIe?
Microchip keenly recognizes the importance of interoperability to address the design requirements of your PCIe network. We are actively involved in the advancement of PCIe standards, and ensures that all of our PCIe interfaced products properly conform to these standards. Microchip also regularly participates in PCI-SIG compliance workshop events, proving interoperability of our Flashtec, Switchtec, Tachyon™ and Adaptec® products. A list of our PCI Express 3.0-compliant products can be found on the PCI-SIG integrators list.

Microchip’s turnkey PCIe reference designs and field-proven interoperable solutions portfolio will streamline your design, accelerating your time to market with differentiated products. Contact your local Microchip sales office today to find the right PCIe technologies and products for your design needs, or visit us at storage.microsemi.com
Support
Microchip is committed to supporting its customers in developing products faster and more efficiently. We maintain a worldwide network of field applications engineers and technical support ready to provide product and system assistance. For more information, please visit www.microchip.com:
