1 Revision History

The revision history describes the changes that were implemented in the document. The changes are listed by revision, starting with the most current publication.

1.1 Revision 1.0

Revision 1.0 is the first publication of this document published in March 2020.

2 MIV RV32IMC v2.1 Release Notes

2.1 Overview

These release notes are issued with the production release of MIV_RV32IMC v2.1. This document provides details about the features, enhancements, system requirements, supported families, implementations, and known issues and workarounds of the IP.

2.2 Features

MIV_RV32IMC has the following features:

- Designed for low power FPGA soft-core implementations
- Supports the RISC-V standard RV32I ISA with optional M and C extensions
- Availability of Tightly Coupled Memory, with size defined by address range
- Direct Access Port (DAP) to TCM
- External, Timer and Soft Interrupts
- Up to six optional external interrupts
- Vectored and non-vectored interrupt support
- Optional on-chip debug unit with a JTAG interface
- AHBL, APB3, and AXI3/AXI4 optional external bus interfaces

2.3 Delivery Types

No license is required to use MIV_RV32IMC. Complete RTL source code is provided for the core.

2.4 Supported Families

- PolarFire[®]
- RTG4[™]
- IGLOO[®] 2
- SmartFusion[®] 2

2.5 Supported Tool Flows

MIV_RV32IMC v2.1 requires Libero[®] System-on-Chip (SoC) v12.1 or later.

2.6 Installation Instructions

The MIV_RV32IMC CPZ file must be installed into Libero software. This is done automatically through the Catalog update function in Libero, or the CPZ file can be manually added using the Add Core catalog feature. Once the CPZ file is installed in Libero, the core can be configured, generated, and instantiated within a design for inclusion in the Libero project.

See the Libero SoC Online Help for further instructions on core installation, licensing, and general use.

2.7 Documentation

This release contains a copy of the MIV_RV32IMC Handbook and RISC-V Specification documents. The handbook, describes the core functionality and gives step-by-step instructions on how to simulate, synthesize, and place-and-route this core, and also implementation suggestions. See the Libero SoC Online Help for instructions on obtaining IP documentation.

A design guide is also included which walks through an example Libero design for PolarFire[®].

For updates and additional information about the software, devices, and hardware, visit the Intellectual Property pages on the Microsemi SoC Products Group website:

<http://www.microsemi.com/products/fpga-soc/design-resources/ip-cores>

More information can also be obtained from [MI-V embedded ecosystem](#).

2.8 Supported Test Environments

No testbench is provided with MIV_RV32IMC.

The MIV_RV32IMC RTL can be used to simulate the processor executing a program using a standard Libero generated testbench.

2.9 Discontinued Features and Devices

None.

2.10 Known Limitations and Workarounds

The following are the limitations and workaround applicable to the MIV_RV32IMC v2.1 release.

1. There is an issue with debug instruction stepping for Compressed NOP instructions where an incorrect step increment is taken with this instruction. The issue is only seen in `c.nop` debug stepping and is not a run time issue. This issue will be resolved in a future revision.
2. For debug operation, the MIV_RV32IMC input CLK frequency should be greater than, or equal to, seven times the JTAG TCK frequency..

No licenses are conveyed, implicitly or otherwise, under any Microsemi intellectual property rights unless otherwise stated.

Microsemi Corporation, a subsidiary of Microchip Technology Inc. (Nasdaq: MCHP), and its corporate affiliates are leading providers of smart, connected and secure embedded control solutions. Their easy-to-use development tools and comprehensive product portfolio enable customers to create optimal designs which reduce risk while lowering total system cost and time to market. These solutions serve more than 120,000 customers across the industrial, automotive, consumer, aerospace and defense, communications and computing markets. Headquartered in Chandler, Arizona, the company offers outstanding technical support along with dependable delivery and quality. Learn more at www.microsemi.com.
